INNOVATIVE & SUSTAINABLE DESIGN

As manufacturers of wood plastic composite products, our collection includes attractive low maintenance decking, cladding, fencing and balustrade systems.

We aim to be at the forefront of the garden design industry with excellent quality, stylish and efficient systems that not only look beautiful but perform to the highest standard.

We use recycled plastic in all of our composite products. In 2021 alone we recycled **4,495** tons of waste plastic in our materials.

CLARITY® COMPOSITE DECKING

Ecoscape Clarity® composite decking is a long lasting, low maintenance alternative to timber decking. Made up of recycled high density polyethylene plastic and reclaimed wood fibres. This unique makeup draws on the durability of synthetic products whilst maintaining the natural look and malleability of timber without any of its notable drawbacks.

This attractive and sustainable composite decking board is available in 5 beautiful colours and has a dual surface finish meaning the board can be laid either side up to achieve a different aesthetic.

Our Clarity boards have also been independently tested to BS 7976-2:2002 and are proven to be non-slip in both wet and dry conditions making family safety one of its most attractive selling points.

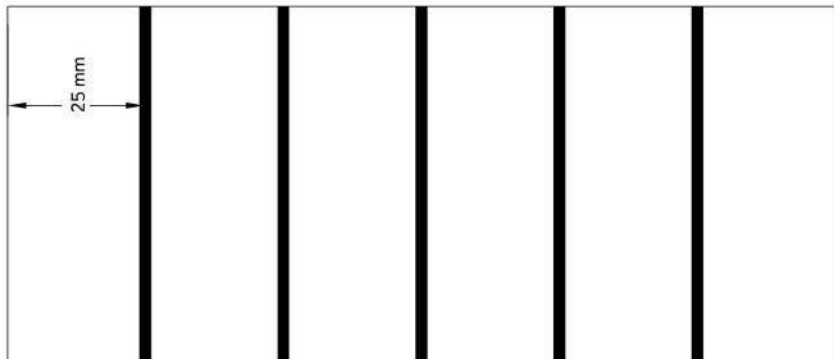

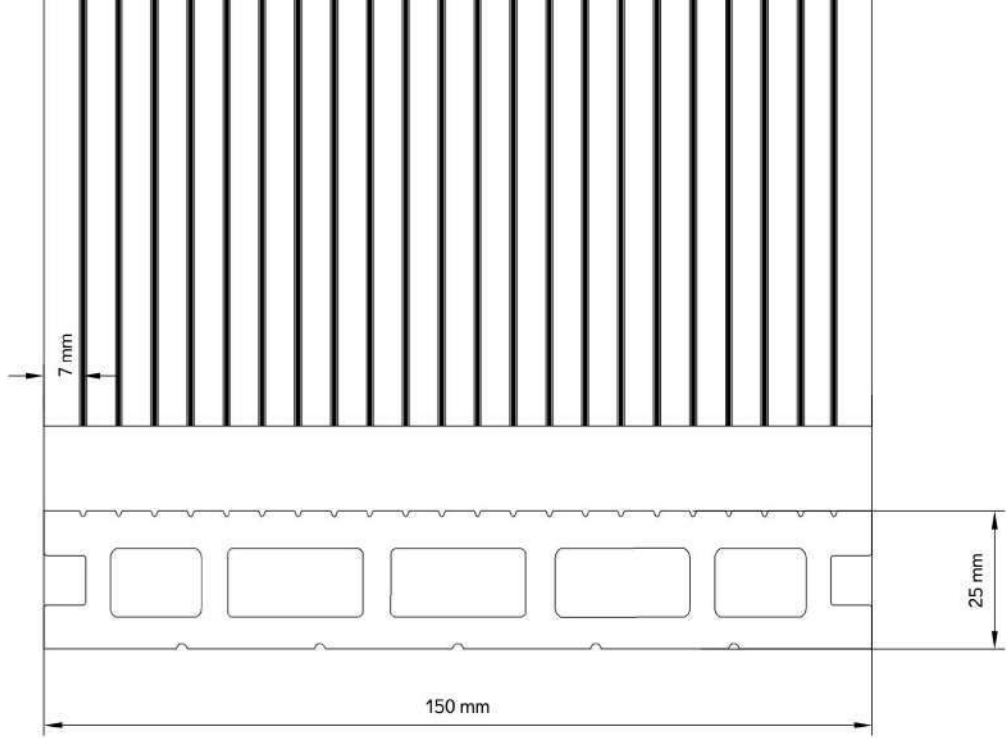

Our T-clip fixing system is purposefully engineered for both quick and easy installation whilst maintaining a high quality finish.

The T shaped clips space decking boards evenly allowing for expansion and contraction with temperature fluctuation.

BENEFITS OF CLARITY[®] DECKING

Environmentally conscious design using 95% ethically sourced materials

Anti-slip Surface

Low maintenance – no need to paint, stain or seal

Does not rot, warp or splinter

Natural looking without many of the drawbacks of timber

Quick and easy Installation system with invisible fixings

Extensive 20 year warranty

FLINT
Forma
Composite Decking

FORMA® COMPOSITE DECKING

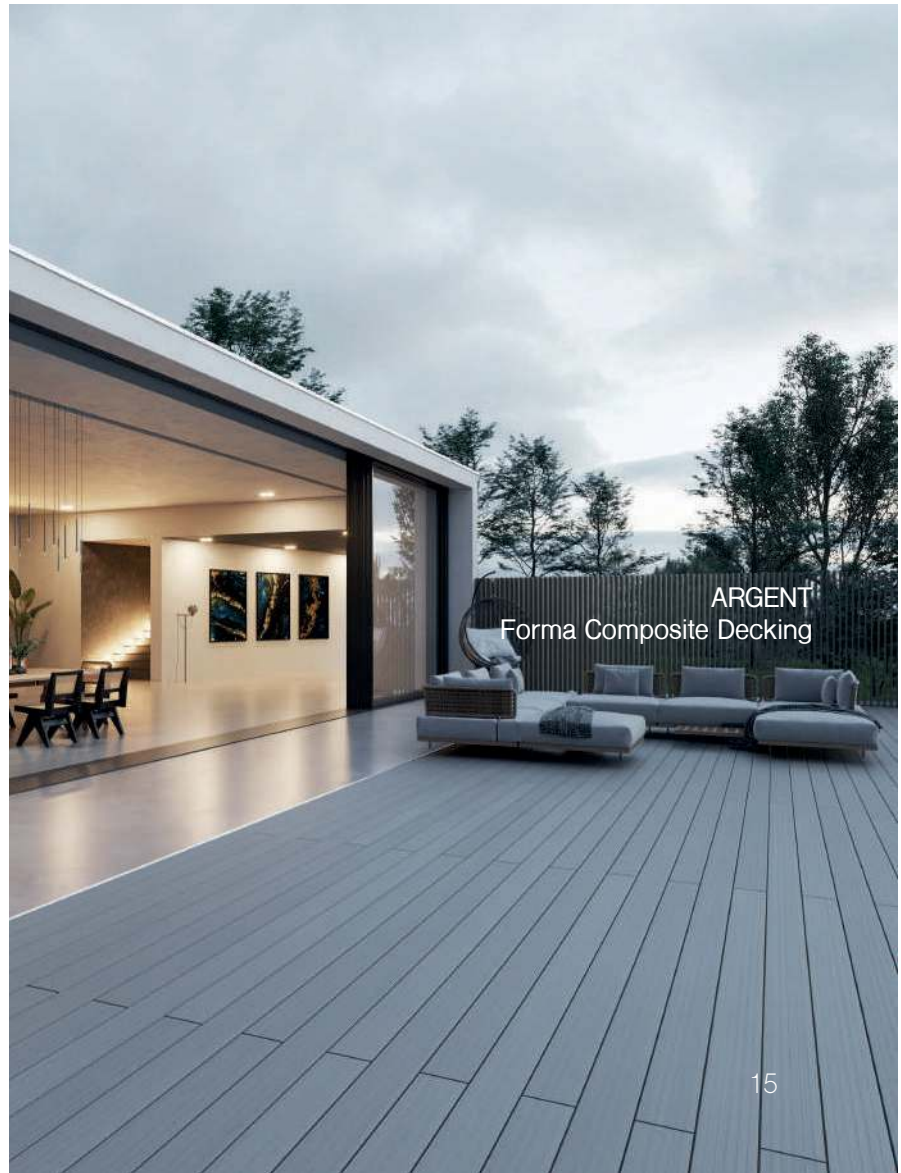

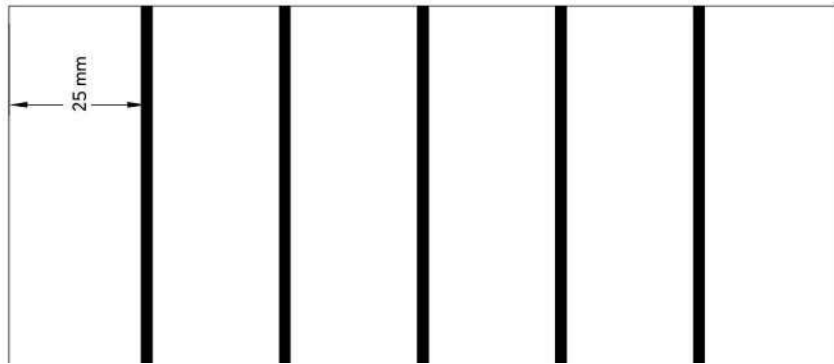

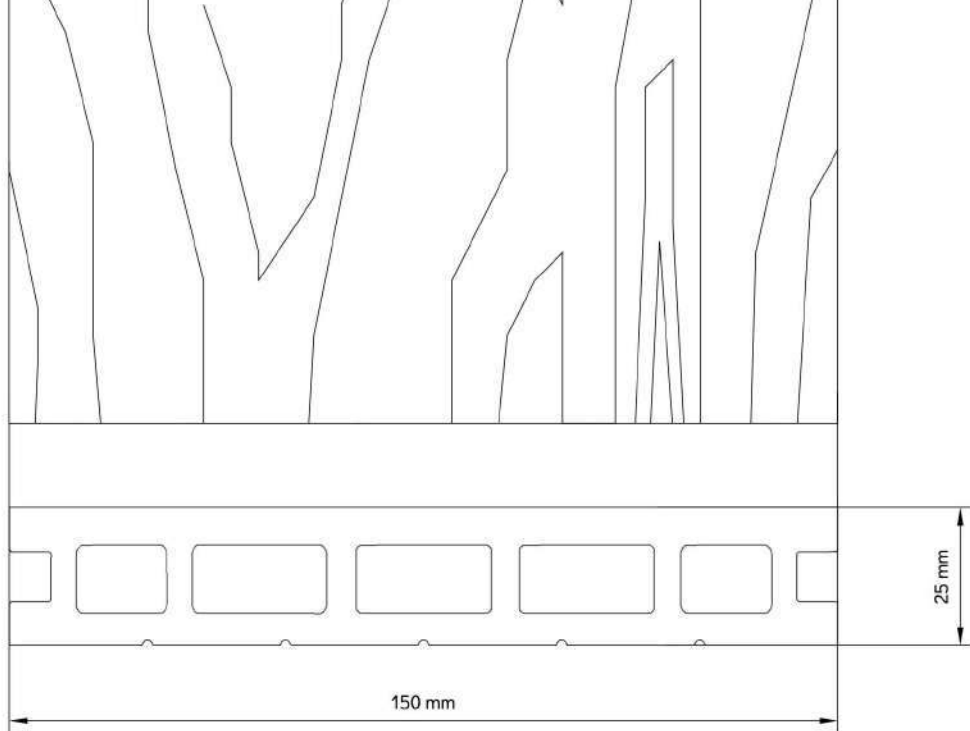

Forma Composite decking is our premium composite with a durable polymer outer shell encapsulating the board. This capping forms an impermeable layer that protects from scratching, staining and fading making it the ultimate carefree, low maintenance flooring.

Available in six beautiful colours this stylish and sustainable decking board can instantly elevate any project into a luxury space.

Our T-clip fixing system is purposefully engineered for both quick and easy installation whilst maintaining a high quality finish.

The T shaped clips space decking boards evenly allowing for expansion and contraction with temperature fluctuation.

Forma's 360° co-extrusion durable capping is scratch and stain resistant, but also beautifully replicates the natural grain, dual tone and texture of timber.

With a 25 year warranty and UV bleaching resistant technology Forma decking requires minimal maintenance to keep its vibrant colour.

FORMA® COMPOSITE PANEL CLADDING

Ecoscape Forma® composite cladding is a long lasting, low maintenance alternative to timber that can be used on various exterior projects; from home renovation to new build apartments, sunrooms or contemporary garden rooms.

Forma composite panel cladding is made up of recycled high density polyethylene plastic and reclaimed wood fibres. With a durable polymer outer shell encapsulating the board, it forms an impermeable layer that protects it from scratching and fading.

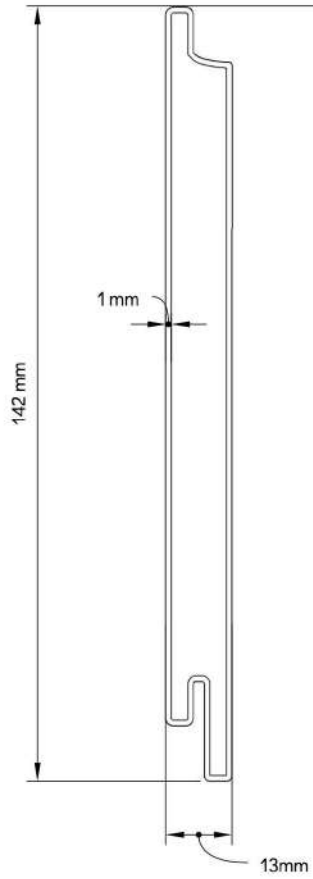

Our tongue and groove capped cladding profiles are available in six colours, utilise a hidden fixing system and have a choice of six innovative fixing trims.

CLARITY® COMPOSITE FENCING & GATE SYSTEMS

Ecoscope's range of composite fencing and gates are an innovative modular wood plastic composite profile that stack to create any desired height. This creates a bespoke long lasting, low maintenance alternative to timber panels and gates.

Fence boards can either be retro-fit between existing fence posts or can be utilised in the fully composite post system; the perfect way to transform any garden into a luxury space.

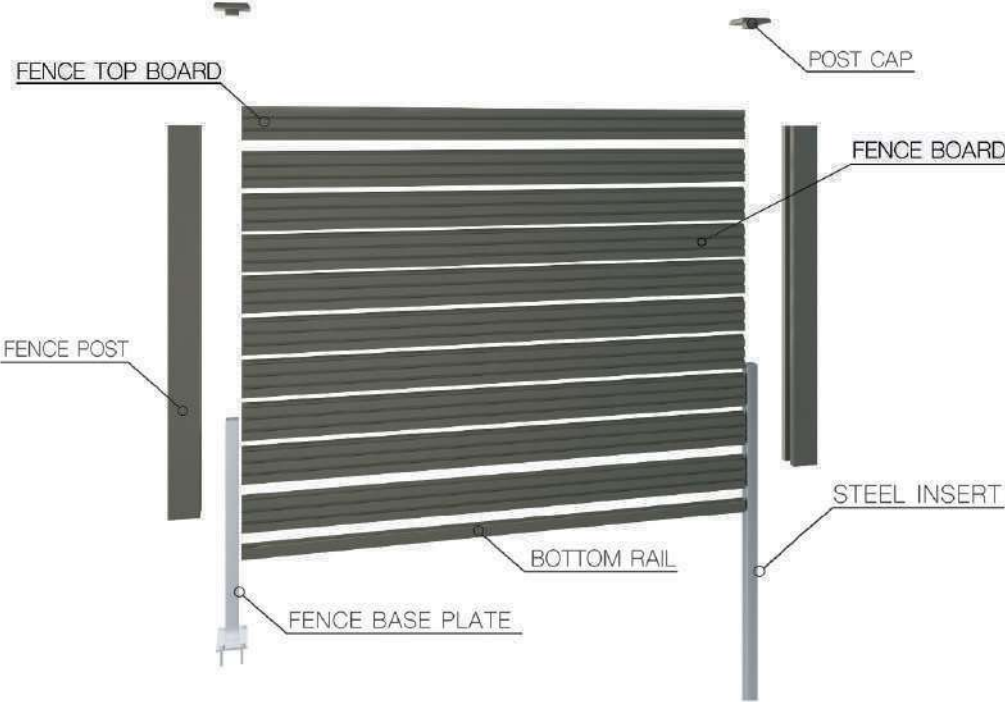

This versatile system offers flexibility and style but also maintains the same environmentally friendly ethos as our other composite products and is made up of the same high quality recycled HDPE plastic and reclaimed wood fibres.

BENEFITS OF COMPOSITE FENCING & GATES

Modular system allowing for multiple design options.

3 Natural colours with matching gates in 4ft, 5ft & 6ft

Environmentally conscious design using 95% ethically sourced materials

Suitable for new project or retrofit between existing concrete posts

Quick and easy installation system

Strong and durable, storm resistant, 45mm thick boards

Extensive 20 year warranty.

PEDESTAL SYSTEMS

All of our decking & paving pedestals are made in Italy from 100% recycled polypropylene using advanced electric injection presses which release no emissions and no waste oil.

The four ranges of pedestal include King, Queen, Junior & Lord and are beautifully boxed in our 100% FSC® packaging. The range comes with a 15 year limited warranty (40+ year design life). We have 10 European registered patents, with our technology being unique to the market.

Across the four ranges you have the availability of self leveling base support, self leveling heads and fixed supports. Our tools section includes all ancillaries and finishing items to cater for most laying issues and needs.

For technical information visit ecoscapeuk.co.uk

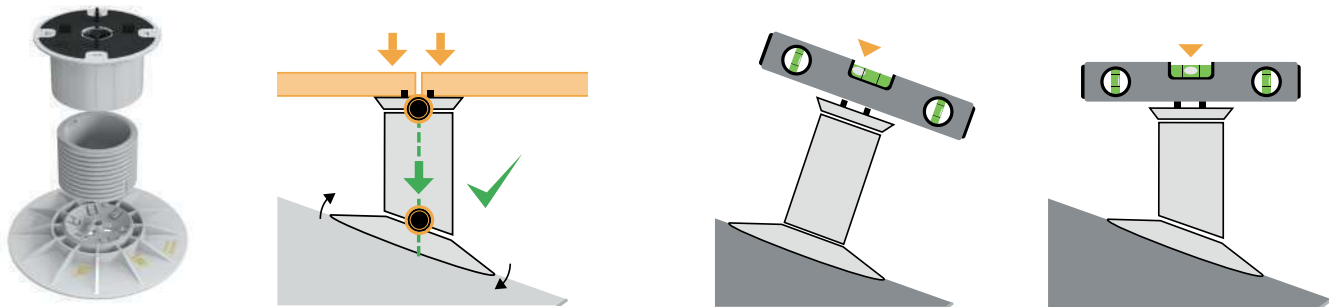

Revolutionary Substructure Solutions

KING
K5 Paving Pedestal 53

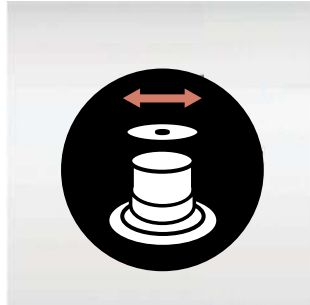

KING DUAL ADJUSTMENT PEDESTALS - K1 -K15

This revolutionary patented pedestal has dual axis of movement for maximum accuracy of adjustment. The top is self-leveling, the bottom allows the installer to choose between fixed or self-leveling base, just by twisting the converter located under the tower. This additional bottom function can correct level differences up to 5% of the surface.

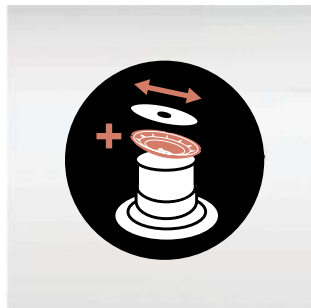

All of our pedestals are made up of 100% recycled high-quality polypropylene to create a sustainable and durable reinforced base and impact resistant screw. The King pedestal is the market's only recycled polypropylene support with a load capacity exceeding 1800kg.

QUEEN FIXED PEDESTALS - Q1 - Q15

Queen is a reliable and durable raised floor support that is adjustable in height, with a fixed head. Ideal for multi-level renovations and projects that require operating at low heights. The Queen's minimum elevation height is just 21 mm, through to 1000mm+.

QUEEN PLUS ATTACHMENT

Queen pedestals are devised to be a fixed head, but with the application of a simple component between the screw and head, the queen plus attachment offers the option of self-leveling at the head to correct slopes of up to 5%. This transitions the Queen pedestal from fixed to a simple and practical self-leveling support.

JUNIOR MINOR ADJUSTMENT PEDESTALS

Junior is an extremely low 12 mm to 30 mm support with a self-leveling base and functions without additional extensions. The movement of the screw runs between the head and the self-leveling base which allows easy leveling of the floor and capable of adjusting slopes of up to 1.5%.

LORD MODULAR CRADLES

Lord cradles are fixed at 8 mm and can be heightened by increments of 4 mm when adding the Lord extension beneath the support. Lord is an effective solution in minor adjustment renovations and in all projects where very low heights are required.

FORTE TIMBER FREE SUPPORT SYSTEMS

50mm x 50mm
Forte Plastic Joist

Using only the highest grade 100% recycled plastics we produce extremely strong and durable plastic joists/battens as an alternative to using a timber substructure. With profiles suitable for both decking and cladding these solutions are especially beneficial in the damp British climate where timber can be compromised in a matter of a few years.

We also offer a recycled aluminium support system. Extremely light weight and durable – aluminium does not warp, shrink, swell like timber and remains perfectly straight throughout its 80+ year lifespan. The recycling process only takes up 5% of the energy used during its manufacturing and the quality of recycle aluminium is the same as that of new.

ENVIRONMENTAL SUSTAINABILITY

All of our composite materials are made using a mixture of reclaimed timber fibres, recycled HDPE and environmentally sustainable bonding agents and dyes to create high quality products that replicate the characteristics of timber without any of the drawbacks; like rotting, warping, drastic colour fading, ongoing maintenance etc.

The use of recycled HDPE plastics helps aid in the battle to reduce landfill and ocean plastics but also reducing our carbon footprint.

For more information about our sustainability visit
